Executive Summary

Introduction and Background

San Ramon Valley Unified School District has contracted with Davis Demographics to develop and analyze demographic data relevant to the district's facility planning efforts. The scope of contracted work includes updating district mapping files, analyzing the district using the previous four years of geocoded student data files, developing, and researching pertinent demographic data in and around the district, identifying current and future residential development plans and preparing a ten-year student population forecast.

The purpose of this report is to identify and inform the district of the demographic trends occurring within the community, how these trends may affect future student populations, and to assist in illustrating facility adjustments that may be necessary to accommodate the potential student population shifts, to assist the district in evaluating future site requirements and the need for potential attendance area boundary changes.

Davis Demographics, a non-biased third-party consultant, has been contracted to prepare and maintain a ten-year demographic study. In this study, Davis Demographics produced detailed neighborhood and attendance area population forecasts based on the residential address of students. Davis Demographics bases its forecasts on the belief that school facility planning is more accurate when facilities are located where the greatest number of students reside. This study is intended to help the district notice specific demographic trends that could assist them in making informed decisions regarding long-range planning efforts.

The Sources of Data section details how the two sources of data – geographic and non-geographic -- are collected and used in the ten-year student population forecast model.

The Ten-Year Forecast Methodology section discusses, in detail, how the factors used in the study were calculated, and why they were used. These factors include area birthrates and their effect on incoming kindergarten classes, the effects of student mobility, student yield factors based on historic housing data and trends, and a detailed review of future residential development within the district.

The Student Resident Forecast Summary sections offer a review of this year's student resident forecast results. These sections include the district-wide student population forecast summary and a forecasted resident student population summary for both the existing attendance areas and the individual study areas from which they were calculated.

While reading this report, it is important to remember that it is based on data gathered at the time of the study. Due to potential population shifts, changes in development plans, fluctuating funding opportunities, and district priorities, all findings presented in this report are subject to change.

Key Items in the District-Wide Analysis:

- Overall, the student population for San Ramon Valley Unified School District is projected to decrease by 1,032 resident students over the next ten years reflecting a declining rate of 3%.
- The TK-5 resident student population is forecasted to grow 5.8% over the next ten years. Additional TK students anticipated from the state's Universal TK mandate are the main contributor to this growth.
- As larger class sizes matriculate through, grades 6-8 are expected to decrease approximately 6% over the next ten years.
- The district high school population is expected to decrease by 12% by SY 2033 as larger class sizes graduate and are replaced by smaller elementary and middle school class sizes.
- The Bishop Ranch planned residential development is well underway is a large contributor to some of the growth at the district-wide TK-5 resident student population over the next years.

1. Methodology

Data Sources

Geographic Map Data

Five (5) geographic data layers were modified or created for use in the ten-year student population forecasts:

Street Centerline Data/Parcels

Street centerline/parcel data files are utilized during the geocoding process of the student data. The geocoding process places a point on the map for every student in the exact location the student resides. Each student is geocoded to the parcels by their given residence address. This enables Davis Demographics to analyze student data geographically. Another vital utilization of the digital street database is in the construction of study areas. Freeways, major streets, and neighborhood streets are generally used as boundaries for the study areas.

Study Areas

Study areas are small geographic areas – such as neighborhoods or portions of neighborhoods – that are considered the building blocks of school district attendance areas. Study areas are geographically defined following logical boundaries within a school district, such as freeways, streets, railroad tracks, or green space. Each study area is then coded with the corresponding elementary, middle, and high school that the students in the area are assigned to attend. By gathering information about the district at the study area level, Davis Demographics and SRVUSD can closely monitor growth and demographic trends in regions and identify the potential need for boundary or facility adjustments. Currently, 627 study areas make up the school district.

Schools

School facility information, including school names, addresses, unique identifying codes, grade ranges, and capacities, was provided to Davis Demographics by district staff.

Planned Residential Development

Residential development data was obtained from the school district. The school district researched possible new developments that could impact future student counts and reviewed the information with school district staff. This data includes the development name, location, housing type, and the total number of units within the development. The planned residential development information is subject to changes in the marketplace; therefore, this data should be reevaluated annually. Davis Demographics and San Ramon Valley Unified School District were monitoring projects closely during this study.

Student Data

- a. HISTORIC STUDENT DATA - Historic population data is used to compare past student population trends as well as the effects of mobility (movement of students in or out of existing housing) throughout the district.

- b. **CURRENT STUDENT DATA** - A student data file representing student membership as of Fall 2023 was provided to Davis Demographics by district staff. This data was summarized by grade level and each student was located by residential address to identify current study area populations. This data is used as a baseline for student population forecasts. The forecasts encompass the next ten years from SY2023-24 through SY2033-34.
- c. **STUDENT ACCOUNTING** - The Student Verification Form indicates the total student enrollment as of 10/4/2023, and the number of students used in the ten-year student population forecasts. The forecast model is based on student residence and typically excludes students residing outside of the district's boundaries.

Forecast Methodology

Davis Demographics has created ten-year, residence-based, modified cohort forecasts for each study area in SRVUSD. The forecast methodology used in this study combines historic student population counts, past and present demographic characteristics, and planned residential development to forecast future student populations at the study- area level. District-wide and school-level forecasts are summarized from the individual study area forecasts.

Ten-Year Forecasts

Projections are calculated ten years from the date of the forecast for several reasons. The planning horizon for any type of facility is typically no less than five years.

Residence-Based

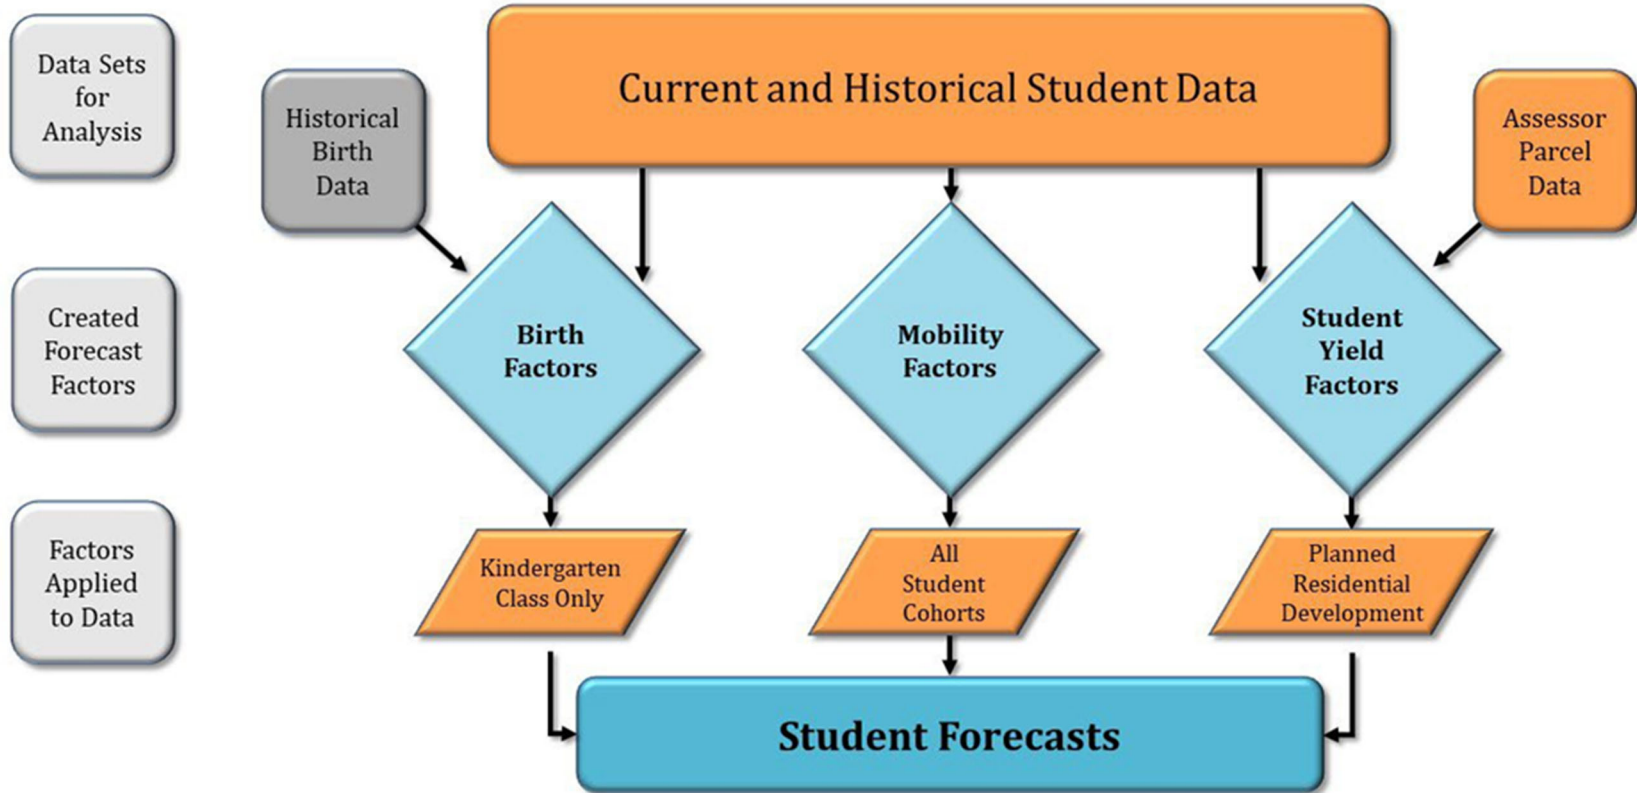

These forecasts are based on where the students reside and where they are assigned to attend school. To provide the most accurate estimate of where future school facilities may be needed, Davis Demographics uses the location of where the students reside as opposed to their school of enrollment because we believe that school facility planning is more accurate when facilities are located where the greatest number of students reside. The best way to plan for future student population shifts is to know where the next group of students will be living.

Typically, district-generated forecasts are based on school enrollments and are forecasted for staffing and budgetary needs. However, this method is often inadequate for long-range planning needs, such as the location of future school facilities, because the location of the students is not taken into consideration. A school's enrollment can fluctuate annually not only due to population trends but also due to variables in the curriculum, program changes, school administration, and open-enrollment policies. These variables can skew the apparent need for new or additional facilities in an area.

Modified Cohort

The method used by Davis Demographics is unique because it modifies a standard cohort forecast with demographic factors and student residential location. For each year of the forecast, 12th grade students graduate and continuing students' progress through to the next grade level. This normal progression of students is modified by the forecast variables detailed below.

Chart 1: Forecasts by Residence Flowchart

Forecast Variables

Birth Rates

Davis Demographics uses the birth data correlating to the district boundary and applies the data accordingly. The assumption underlying the use of birth statistics from year to year is that increases or decreases in the number of births in the area will translate to increases or decreases in future kindergarten enrollment. For example, the SY2023 kindergarten class in SRVUSD was born five years previous in 2018. Any subsequent changes in births in 2019 compared to 2018 and 2020 to 2018, etc. would result in similar increases or decreases in future kindergarten class sizes.

Incoming kindergarten classes for existing homes are estimated by comparing changes in past births in the area. Davis Demographics assumes the current kindergarten class was born five years prior in 2018. Future incoming kindergarten classes are estimated by comparing the number of births in 2018 to the number of births in 2019 through 2022. Davis Demographics compared the total births in 2018 to the total births in 2019 to determine a factor for next year's kindergarten class (SY2024-25). The 2018 births were compared to 2020 (SY2025-26 K class), 2018 to 2021 (SY2026-27 K class), and on.

Table 2: Birth Factors

		Births by Zipcode								Birth Rate			
Birth Year	Kinder Year	94506/94507		94526		94582		94583		Total	% Change*	Districtwide Rate	School Year

2022	2027	250	1.142	225	1.098	256	0.805	323	1.059	1,054	100.7%	1.007	2027/28
2023	2028		1.142		1.098		0.805		1.059		100.7%	1.007	2028/29
2024	2029		1.142		1.098		0.805		1.059		100.7%	1.007	2029/30
2025	2030		1.142		1.098		0.805		1.059		100.7%	1.007	2030/31
2026	2031		1.142		1.098		0.805		1.059		100.7%	1.007	2031/32
2027	2032		1.142		1.098		0.805		1.059		100.7%	1.007	2032/33
2028	2033		1.142		1.098		0.805		1.059		100.7%	1.007	2033/34

*% Change refers to the change in total births for each year compared to the base year.

Birth data for the district was collected from the California Department of Health Statistics to calculate the birth rates applied in the forecast.

Student Mobility Factors

Student mobility factors further refine the ten-year student population forecasts. Mobility refers to the increase or decrease in the movement of students within and out of the district boundary’s existing housing. Mobility is a spatial cohort survival rate meaning that it calculates the movement of students from grade in that geographic area. Mobility factors consider apartment movement within the district, housing resales, foreclosures, movement out of the district, and high school dropout rates. Mobility, like a cohort, is applied as a percentage of increase/decrease to each grade for every year of the Forecasts.

A net increase or decrease of zero students over time is represented by a factor of **1.000** or a 100% pass-through rate. A net student loss is represented by a factor less than 1.000 (such as **.96** or a -4% net loss) and a net gain by a factor greater than **1.000** (such as **1.05** or a 5% net increase).

How is Mobility applied?

	100	Kindergarten students in SY2021-22
Example:	<u>X</u> 1.11	(Alamo ES 1 st -grade mobility)
	= 111	1 st -grade students in SY2022-23

NOTE: Mobility rates based upon historical student data from 2020-21 to 2023-24

Davis Demographics used current elementary school attendance areas as the basis to calculate Mobility Factors. Using small geographic areas helps identify and focus on trends within the district.

Mobility is calculated using four years of student data.

Student Yield Factors (SYF)

The Student Yield Factors, when applied to planned residential development units, determine how many additional students will be generated from new construction within the district.

Two sets of data are required to calculate Student Yield Factors: a current student file provided by SRVUSD and current housing unit data. The Transit Oriented Development (TOD) yield factors are a sampling from the Pleasanton Unified School District given that there are no TOD built within the SRVUSD district boundary. The geocoded student data file is overlaid with the housing data to determine how many students reside in each housing type. This allows Davis Demographics to associate each student with a specific housing unit.

The SYF is an important tool for school districts to use in planning for future enrollment growth. By knowing the SYF for different types of housing, districts can get a better idea of how many students they can expect to enroll in the future. This information can be used to make decisions about staffing, facilities, and programming. The following student yield factors by SRVUSD and applied to the resident student population forecasts. A sampling of the Pleasanton USD Transit-Oriented Development TOD was applied to planned residential development within the Bishop Ranch area which represent the first set of TOD units that will get built within the district boundary.

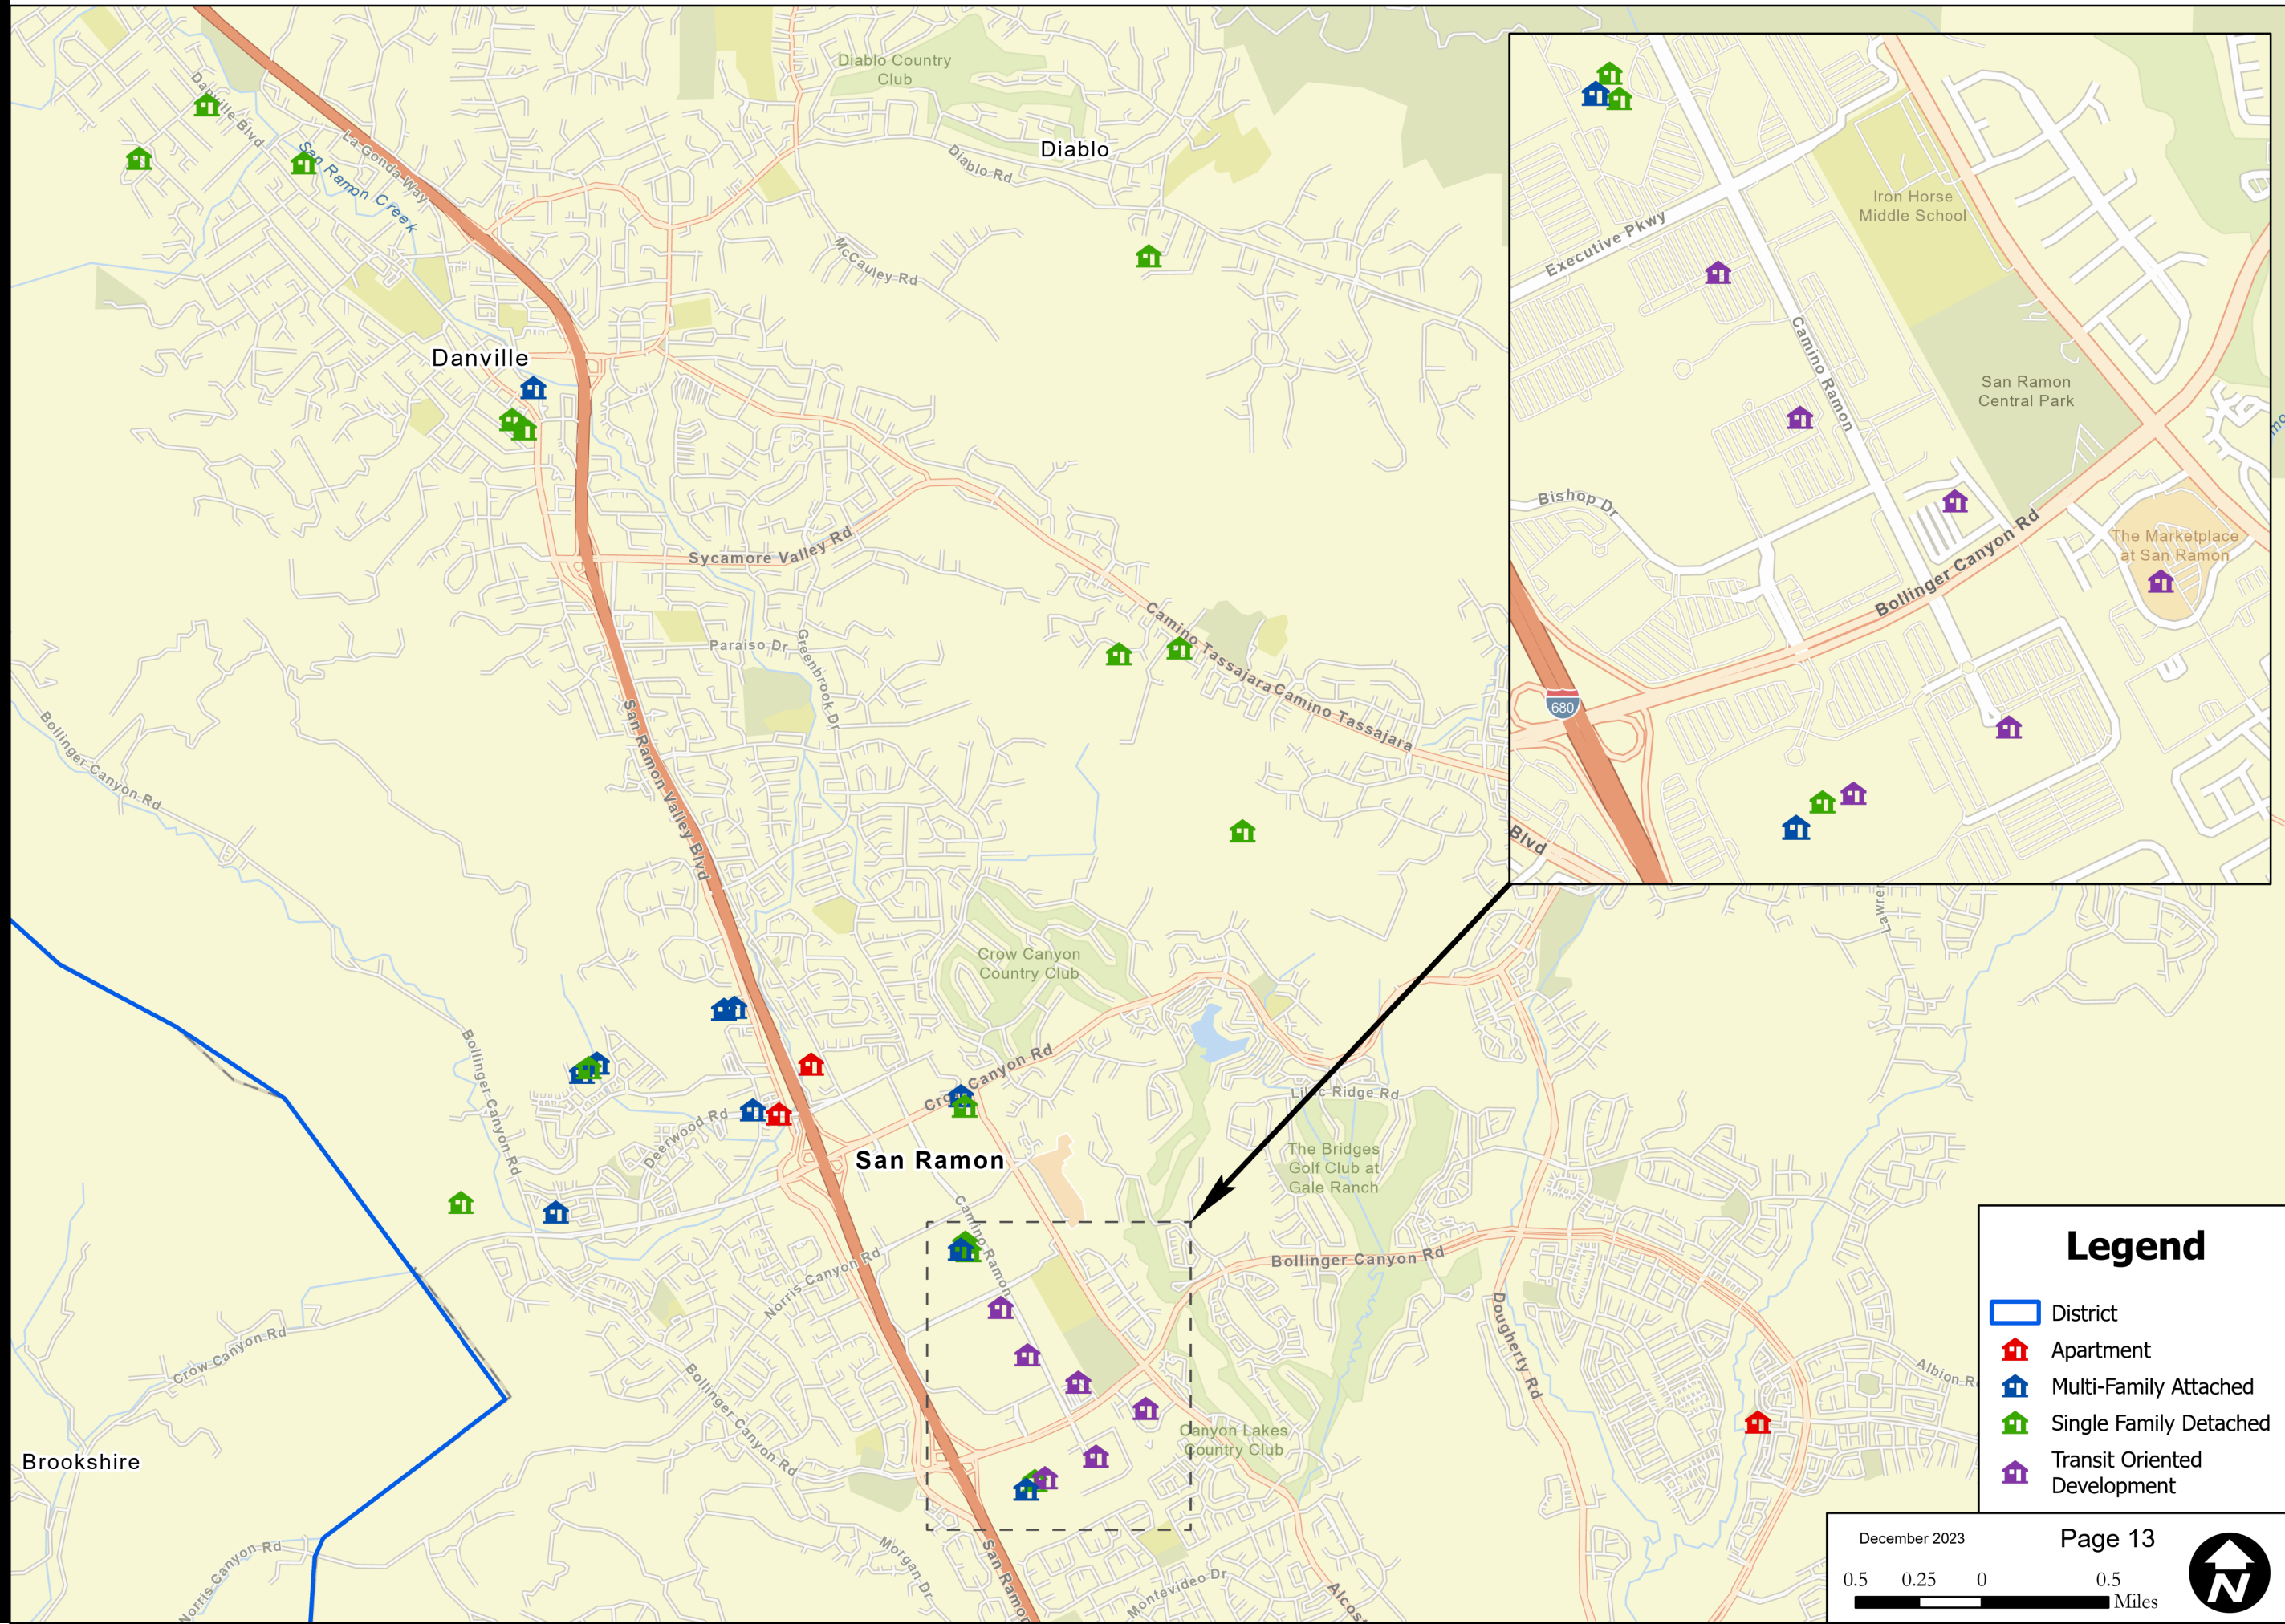

Table 4: Student Yield Factors

Housing Type	K-5	6-8	9-12
Single Family Detached	0.35	0.18	0.16
Single Family Attached	0.31	0.10	0.10
Multi-Family	0.16	0.08	0.09
TOD - Pleasanton	0.113	0.034	0.049

Planned Residential Development

Closely related to the Student Yield Factors are planned residential development units. Planned residential development data is collected to determine the number of new residential units that will be built over the time frame of the student population forecasts. Davis Demographics collected this information from San Ramon Valley Unified School District. Map 1, Table 5 and Table 6 outline this planned residential development information.

Active and Future Residential Developments in the San Ramon Valley USD Over the Next Ten Years

Attendance Matrix

An attendance matrix has been included to provide a better understanding of where students reside and where they attend school. **Remember, Davis Demographics forecasts are based on where the students reside, not where the student is enrolled. This method allows Davis Demographics to provide the most accurate forecast of where shifts in student population may occur and changes to future facilities (if necessary) should be located.** Because Davis Demographics forecasts are based on where the students reside, the figures we use as a base for each school’s resident forecast may be slightly higher or lower than the actual reported enrollment for each school. The best way to plan for future facilities is to know where the next group of students will be coming from, not necessarily which school they are currently attending.

Attendance matrices act as a “check and balance” for student accounting, illustrating where the students reside (in what School of Residence) based upon their geocoded address and which school they attend (School of Attendance) based upon District provided student data. It is essential to show how the students used in the forecasts match up to the district’s records of enrollment for each school. Furthermore, intra-district transferring patterns can be determined by comparing School of Residence data to the School of Attendance data. The student counts used in the matrix represent SRVUSD’s enrollment as of Fall 2023.

Reading the Matrix

Starting with the TK-5 Elementary School Attendance Matrix, let's begin with Alamo as an example. Following down the first column with the Alamo heading, there are 329 TK-5 grade students attending Alamo and reside in the Alamo attendance area. Continuing downward, no students attend Alamo that reside in the Bella Vista ES attendance area. Next, it shows that no students attend Alamo and reside in the Bollinger attendance area, and so on.

The row “Out of District Students” refers to students living completely outside of the San Ramon Valley Unified School District boundary but attending the District's schools. There are 6 Out of District students attending Alamo. The “Total Enrollment” is the total number of students attending a school regardless of where they reside and reflects the district’s enrollment counts for each school. There are 350 TK-5 students attending Alamo as of fall 2023.

The next step is to read across the matrix, beginning with the Alamo attendance area row. We know 329 represents the total number of TK-5 grade students residing and attending Alamo. The next column, Bella Vista refers to the number of TK-5 grade students residing in the Alamo attendance area but attending Bella Vista ES. There are 5 students residing in the Alamo attendance area but attending Bella Vista ES.

The “Count of TK-5 Students Living in Attendance Area” column towards the far left of the matrix is the total number of grade TK-5 students living in that particular attendance area. There are 329 TK-5 students residing in the Alamo attendance area. The Middle and High School (Table 9 and 10) attendance matrices are reported in the same manner as the Elementary Matrix.

Table 8: Elementary School Attendance Matrix

SCHOOL OF RESIDENCE	Attendance Area	Count of TK-5 Students Living in Attendance Area	SCHOOL OF ENROLLMENT																					
			Alamo ES	Bella Vista ES	Bollinger ES	Country Club ES	Coyote Creek ES	Creekside ES	Golden View ES	Green Valley ES	Greenbrook ES	Hidden Hills ES	John Baldwin ES	Live Oak ES	Montair ES	Montevideo ES	Neil Armstrong ES	Quail Run ES	Rancho Romero ES	Sycamore Valley ES	Tassajara Hills ES	Twin Creeks ES	Vista Grande ES	Walt Disney ES

3. District-Wide Student Population Forecasts

The student population is forecasted out ten years for each of the study areas, attendance areas, and for the entire San Ramon Valley Unified School District. The district-wide summary enables the district to see a broad overview of future population shifts and what effect these shifts may have on existing and future facilities. Each attendance area is summarized to give a local view of population changes and identify variances within the district.

Together, these forecast summaries present the means for identifying the timing of future population shifts and overall facility adjustments needed to accommodate these shifts. Study areas and their forecasted resident students can be shifted between schools to assist in balancing enrollment through boundary changes, grade-level reassignments, or other means identified to better utilize school facilities. Forecasts provided in this report are based on students who live in the district Fall 2023.

Forecast Trends

The building blocks of the forecasts are the individual study areas. There are currently a total of 627 study areas in the San Ramon Valley Unified School District. The attendance areas and district summary are simply the compilation of all the study areas. For each study area, the student counts are forecasted over ten years (Current: SY2023-24; Forecasted: SY2024-25 through SY2033-34).

As of 10/4/2023, the district reported a total enrollment of 29,091 grade TK-12 students: 11,955 in grades TK-5, 6,495 in grades 6 through 8, and 10,191 in grades 9 through 12. Of those reported students, Davis Demographics used 28,649 TK-12 resident students to calculate the ten-year forecast. The students living outside of the district boundaries (442 students) were left out of the forecast.

The student population for SRVUSD is expected to decrease by 4.96% over the next ten years. Overall, the student population for San Ramon Valley Unified School District is projected to decrease by 1,443 resident students over the next ten years. The TK-5 resident student population is forecasted to increase by 4.3% over the next ten years. Additional TK students anticipated from the state's Universal TK and the forecasted Bishop Ranch residential units are the main contributors to the anticipated resident TK-5 growth over the next 10 years. As larger class sizes matriculate through, grades 6-8 are expected to decrease by approximately 8% over the next ten years. The district high school population is expected to decrease by 14% by SY 2033 as larger class sizes graduate and are replaced by smaller elementary and middle school class sizes.

Staffing Projections (Projections by Enrollment)

Five-Year Staffing Projections

Mid-term to long-term facilities planning is always best when it is based upon the resident location of future student populations, rather than the enrollment at the individual schools. However, a Five year projected enrollment can be used to assist with estimating staffing and budget requirements over the short term.

Methodology for Schools with Attendance Boundaries

Calculating a staffing projection for schools with attendance boundaries is different from calculating it for a school without attendance boundaries. For school with attendance boundaries, the Five year projected enrollment is calculated using a combination of future resident population and historic transfer patterns for each school.

Similar to the mobility factors in the residence projections, a cohort is derived by averaging four years of past transfer patterns. The cohort is calculated for both transfers into and out of each school for each grade between 1 and 12 that the school serves. This cohort is then applied to the current transfer by grade of the base year students to come up with estimated in and estimated out transfers for the future years. To estimate the transfers in and transfers out for the lowest grade served at each school, an average is taken of the last four years of transfers. Finally, projected enrollment by grade for each school is calculated by taking the projected resident population, and adding the estimated transfers in and transfers out.

Methodology for Schools without Attendance Boundaries

To calculate a staffing projection for schools without attendance boundaries, a different method of calculation is used. Transfers in and transfers out for the lowest grade served at each school are estimated by taking an average of the last four years of transfers. Each subsequent grade is calculated using the non-weighted cohort survival method and applied to the current year's enrollment.

Here is a school's staffing projection report. The numbers were calculated using sample data.

Adams Elementary School

	A	B	C	D	E	F	G	

A and B - Projected Residence - Projected residence by grade for each school:

Projected residence is taken from a 5, 7, or 10 year projection which is calculated using the SchoolSite Projections tool.

C - Estimated Transfers In:

Estimated transfers in is based on a cohort derived from four years of historical transfer data.

D - Estimated Transfers Out:

Estimated transfers out is based on a cohort derived from four years of historical transfer data.

E - Actual Enrollment - Actual enrollment by grade for each school:

Enrollment by grade can be derived by selecting all students attending each school and summarizing by grade.

F - SchYr Projected Enrollment - Projected enrollment by grade for each school for the first year of projection:

Calculated using projected residence by grade and adding the transfers in and transfers out. $F=A+C+D$

G - SchYr Projected Enrollment - Projected enrollment by grade for each school for the second year of projection:

Calculated by using projected residence by grade and adding the transfers in and transfers out. $G=B+C+D$

Students Included in Staffing Projection: Resident, Out of District, Unmatched, Transitional Kindergarten
